

Introduction to R Markdown

Albert-Ludwigs-Universität Freiburg

10.02.2022

Julius Fenn, M.Sc.

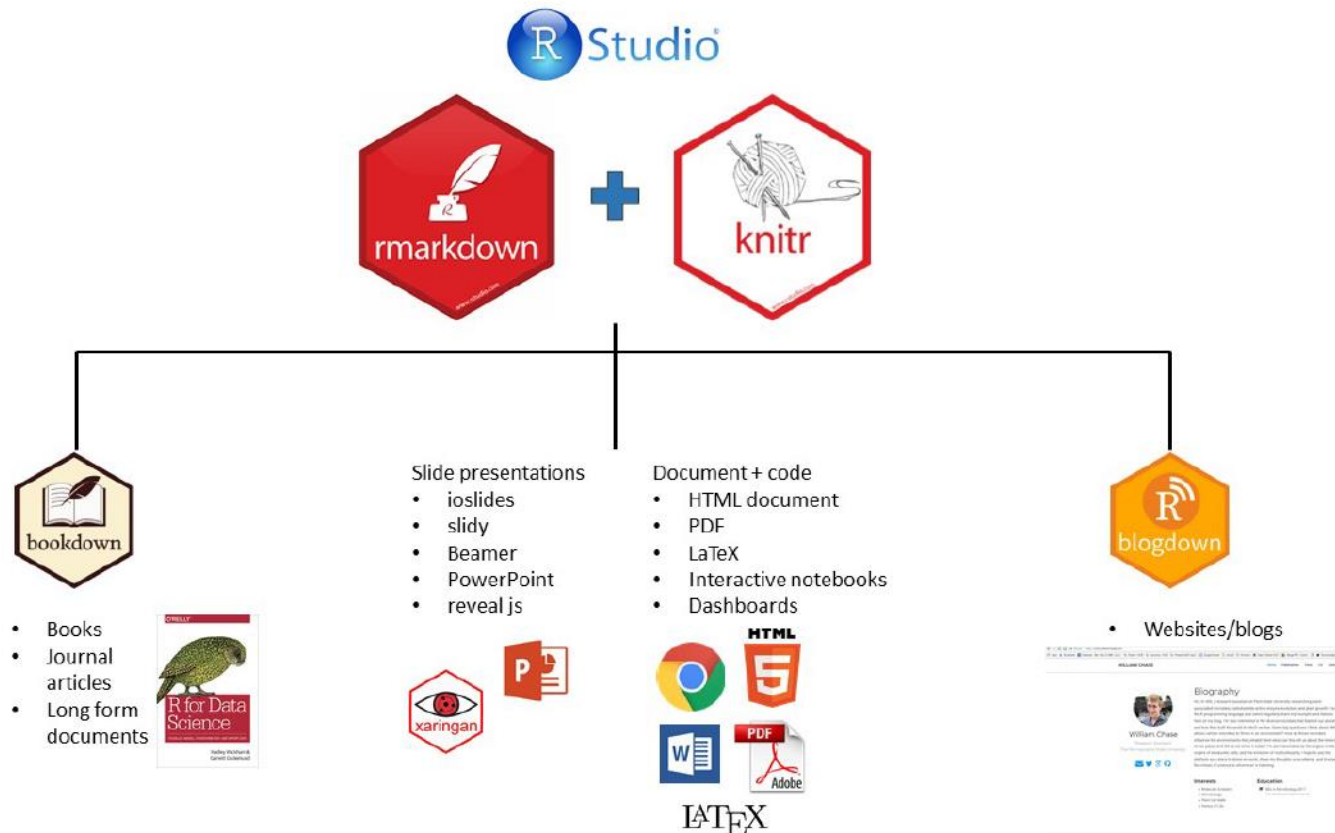

**UNI
FREIBURG**

What is R Markdown?

R Markdown

Examples

- Bookdown: <https://rmarkdown.rstudio.com/docs/>
- Bookdown: <https://r4ds.had.co.nz/>
- Shiny-App / dashboard (interactive):
<https://jjallaire.shinyapps.io/shiny-kmeans/>

Own work:

- Shiny-App:
<https://fennapps.shinyapps.io/shinyCAMELv01/>
- Website: <https://fennstatistics.netlify.app/>

- R Markdown allows you to create documents that serve as a neat record of your analysis
- enables reproducible research (appendix to a paper, upload it to an online repository, keep as a personal record, ...)
- RMarkdown file (.Rmd), when you knit the RMarkdown file, the Markdown formatting and the R code are evaluated, and an output file (HTML, PDF, etc) is produced.
- R Markdown makes use of [Markdown](#) syntax
 - R Markdown converted to standard Markdown using ‘[knitr](#)’ package

What is markdown?

- Markdown is a very simple ‘markup’ language (=HTML)
 - provides methods for creating documents with headers, images, links etc. from plain text files, while
 - keeping the original plain text file easy to read
- Basic Syntax:
 - <https://www.markdownguide.org/basic-syntax>
 - <https://raw.githubusercontent.com/rstudio/cheatsheets/main/rmarkdown.pdf>

MARKDOWN SYNTAX

This is an H1 header format

This is an H2 header format

This text will be in italics

****This text will be in bold****

Unordered list:

- First
- Second
- Third

Ordered list:

1. First item
- 2 Second item
3. Third item

Advanced Linking: [Google](#) and [UGent](#)

A way to include some latex code in R Markdown

$$y_{ij} = b_{ij} + \beta_0 + \beta_1$$

What is knitr?

- R package designed for dynamic report generation in R
- Script contains a mixture of text and R code, which is when processed replaced by text and output, including figures and tables
- Uses R as programming language and a documentation language (LateX, Markdown)
- Inline R code within the text and separate code chunks

Xie, Y. (2017). *Dynamic Documents with R and knitr*. Chapman and Hall/CRC, download: <https://duhi23.github.io/Analisis-de-datos/Yihue.pdf>

Using rmarkdown (knitr) in R Studio

The screenshot shows the R Studio interface with an R Markdown document open. The document contains several code chunks and text blocks. A red arrow points to the 'Knit Word' button in the top toolbar, with the text 'Knit to Word, pdf or html' next to it. The code chunks are labeled 'Code chunk' in blue. The text blocks are labeled 'Inline R code' in yellow. The histogram plot is titled 'Histogram of cars\$speed'.

```
1 title: "Knitr_Demo"
2 output: word_document
3 ---
4
5
6 {r global_options, include=FALSE}
7 library(knitr)
8 knitr::opts_chunk$set(fig.width=12, fig.height=8,
9   echo=FALSE, warning=FALSE, message=FALSE)
10
11
12 Cars is a built-in dataset in R. This dataset has nrow(cars) rows.
13 We can also see our dataset using the head command as follows:
14 {r chunk1}
15 head(cars)
16
17
18 Tables using kable:
19 {r chunk_table}
20 x <- rnorm(100)
21 y <- 2*x + rnorm(100)
22 lr <- lm(y~x)
23
24 kable(summary(lr)$coeff, digits = 2, row.names = FALSE,
25   col.names = c("Estimate", "Standard Error", "t-value", "p-value"),
26   caption = "Linear Regression",
27   format.args = list(decimal.mark = ","))
28
29
30 We can see the summary statistics using by embedding an R code chunk like this:
31 {r chunk2}
32 summary(cars)
33
34
35 You can also embed plots, for example:
36 {r chunk3, echo=FALSE, eval = TRUE, fig.width=6}
37 hist(cars$speed)
38
39 Note that the 'echo = FALSE' parameter was added to the code chunk to prevent printing the R code generating the plot.
40 Also, if we write 'eval = FALSE' parameter in the code chunk, the R code will not be executed.
41
42
43 (Top Level)
```

Histogram of cars\$speed

Frequency

cars\$speed

cars\$speed	Frequency
0-5	2
5-10	7
10-15	17
15-20	17
20-25	7

Elements: YAML Header

- at the top of any RMarkdown script is a YAML header section enclosed by ---
- by default this includes a title, author, date and the file type you want to output to
 - many other options are available for different functions and formatting

A screenshot of the RStudio interface. The top toolbar shows the 'Knit' button, which is highlighted with a red rectangle. Below the toolbar, a code editor shows the following YAML header for an RMarkdown file named 'rmarkdowntutorial.Rmd':

```
1 ---  
2 title: "Edinburgh Biodiversity"  
3 author: John Doe  
4 date: 22/Oct/2016  
5 output: html_document  
6 ---
```

The 'output: html_document' line is underlined with a red line.

Elements: YAML Header

- using the toc option and specify the depth of headers that it applies to using the toc_depth option
- us to specify a bibliography file using the bibliography metadata field in YAML
 - See: <https://bookdown.org/yihui/rmarkdown-cookbook/bibliography.html>

```
1 ---
2 title: "my title"
3 author: "Julius Fenn"
4 date: "2021-0X-XX"
5 output:
6   html_document:
7     toc: yes
8     toc_depth: 3
9     number_sections: yes
10  pdf_document:
11    toc: yes
12    toc_depth: '3'
13  word_document:
14    toc: yes
15    toc_depth: '3'
16 bibliography: LibraryAll.bib
17 biblio-style: apalike
18 link-citations: yes
19 ---
20
```

Elements: Code chunk

- To embed a chunk of R code into your report, surround the code with two lines that each contain three backticks. After the first set of backticks, include `{r}`, which alerts knitr that you have included a chunk of R code

```
Here's some code
```${r}
dim(iris)
```
```

Here's some code

```
dim(iris)
```

```
## [1] 150  5
```

Elements: Code chunk options

- to omit the results from your final report (and not run the code) add the argument `eval = FALSE` inside the brackets and after `r`

```
Here's some code  
```${r eval=FALSE}  
dim(iris)
```
```

```
Here's some code  
  
dim(iris)
```

Elements: Code chunk options

- to omit the code from the final report (while including the results)
add the argument `echo = FALSE`

```
Here's some code  
```${r echo=FALSE}  
dim(iris)
````
```

Here's some code

```
## [1] 150 5
```

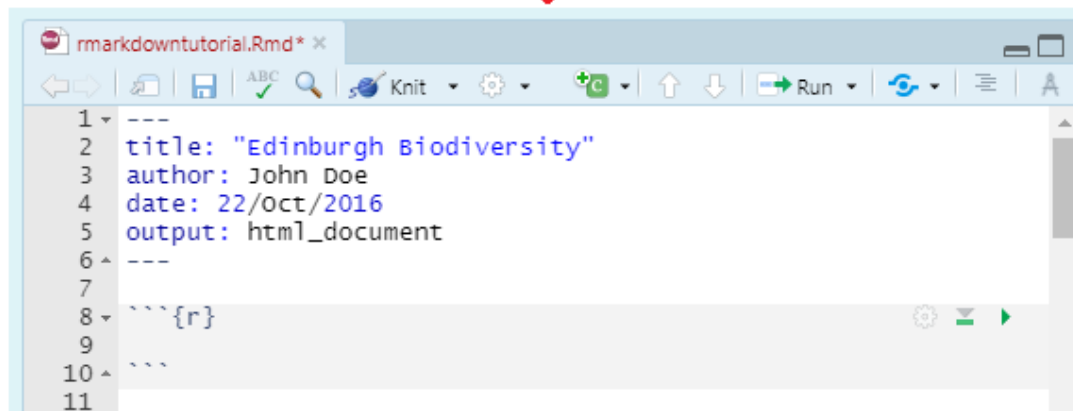

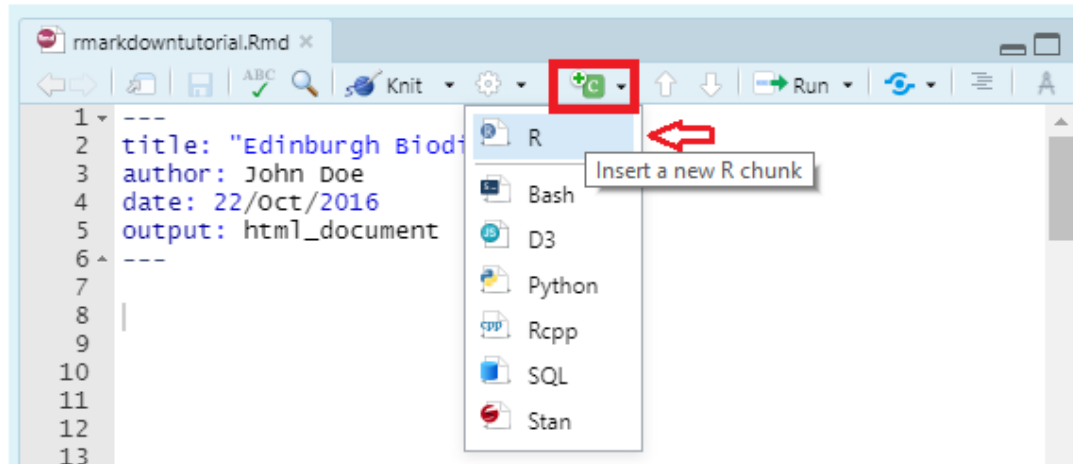

More Code Chunk Instructions

| Rule | Example (default) | Function |
|-----------------------|-------------------|--|
| eval | eval=TRUE | Is the code run and the results included in the output? |
| include | include=TRUE | Are the code and the results included in the output? |
| echo | echo=TRUE | Is the code displayed alongside the results? |
| warning | warning=TRUE | Are warning messages displayed? |
| error | error=FALSE | Are error messages displayed? |
| message | message=TRUE | Are messages displayed? |
| tidy | tidy=FALSE | Is the code reformatted to make it look "tidy"? |
| results | results="markup" | How are results treated?
"hide" = no results
"asis" = results without formatting
"hold" = results only compiled at end of chunk (use if many commands act on one object) |
| cache | cache=FALSE | Are the results cached for future renders? |
| comment | comment="##" | What character are comments prefaced with? |
| fig.width, fig.height | fig.width=7 | What width/height (in inches) are the plots? |
| fig.align | fig.align="left" | "left" "right" "center" |

all possible options see: <https://yihui.org/knitr/options/>

Elements: Code chunk insert

Elements: Code chunk run

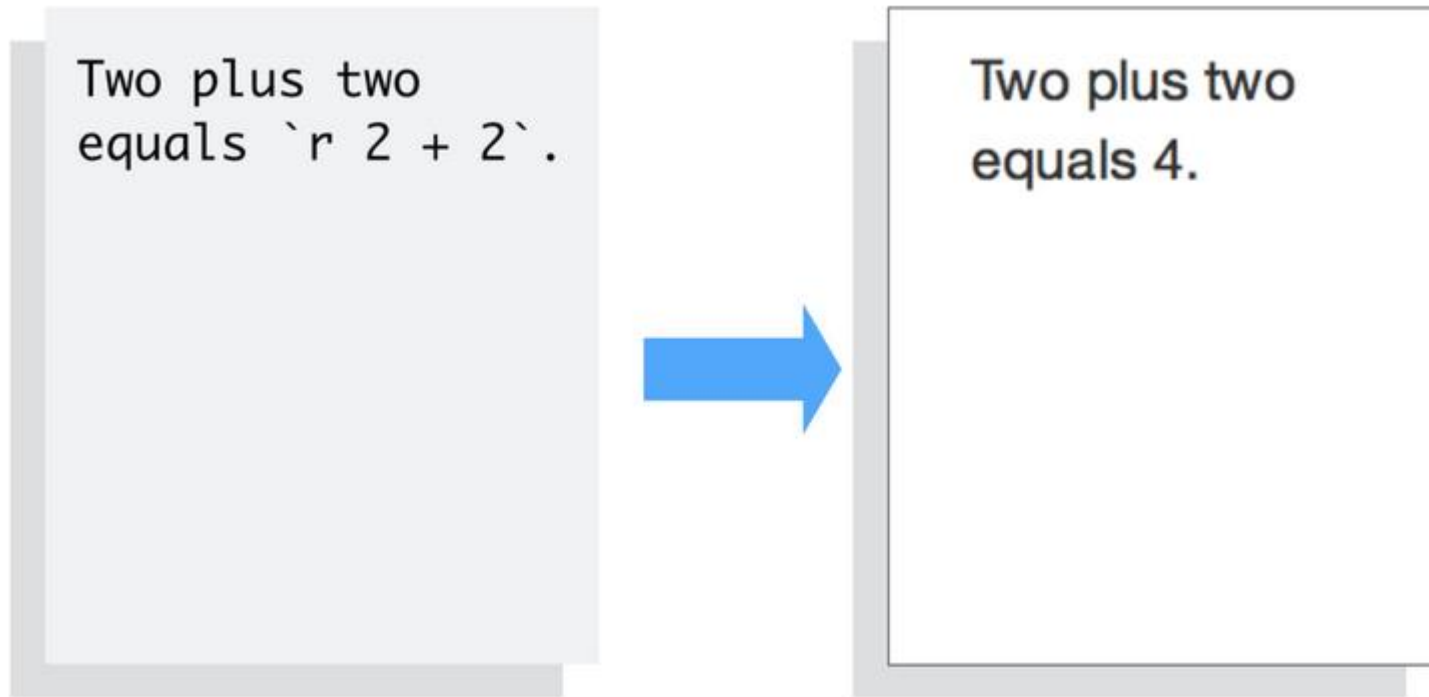

- you can run an individual chunk of code at any time by clicking on the small green arrow and the output of the code will appear just beneath the code chunk

Elements: Inline code

- knitr will replace the inline code with its result in your final document (inline code is always replaced by its result). The result will appear as if it were part of the original text

Inserting figures, tables

- by default, RMarkdown will place graphs by maximizing their height, while keeping them within the margins of the page and maintaining aspect ratio
- the most aesthetically pleasing and simple table formatting function is `kable()` in the `knitr` package (and `stargazer` package)

```
```{r, fig.width = 4, fig.height = 3}
A <- c("a", "a", "b", "b")
B <- c(5, 10, 15, 20)
dataframe <- data.frame(A, B)
print(dataframe)
boxplot(B~A,data=dataframe)
```
```

```
```{r}
library(knitr)
kable(dataframe, digits = 2)
```
```

R CODE + TEXT => REPORT

```
---
title: "Knitr_Demo"
output: word_document
---

```{r global_options, include=FALSE}
library(knitr)
knitr::opts_chunk$set(fig.width=12, fig.height=8,
 echo=FALSE, warning=FALSE, message=FALSE)
```

Cars is a built-in dataset in R. This dataset has `nrow(cars)` rows.
We can also see our dataset using the head command as follows:
```{r chunk1}
head(cars)
```

Tables using kable:
```{r chunk_table}
x <- rnorm(100)
y <- 2*x + rnorm(100)
lr <- lm(y~x)

kable(summary(lr)$coeff, digits = 2, row.names = FALSE,
 col.names = c("Estimate", "Standard Error", "t-value", "p-value"),
 caption = "Linear Regression",
 format.args = list(decimal.mark = ","))
```

We can see the summary statistics using by embedding an R code chunk like this:
```{r chunk2}
summary(cars)
```

You can also embed plots, for example:
```{r chunk3, echo=FALSE, eval = TRUE, fig.width=6}
hist(cars$speed)
```

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing the R code generating the plot.
Also, if we write `eval = FALSE` parameter in the code chunk, the R code will not be executed.
```

Use 'kable' for tables

Plot

=>

Knitr_Demo

Cars is a built-in dataset in R. This dataset has 50 rows. We can also see our dataset using the head command as follows:

```
## speed dist
## 1 4 2
## 2 4 10
## 3 7 4
## 4 7 22
## 5 8 16
## 6 9 10
```

Tables using kable:

Linear Regression

| Estimate | Standard Error | t-value | p-value |
|----------|----------------|---------|---------|
| -0.07 | 0.1 | -0.71 | 0.48 |
| 1.88 | 0.1 | 18.62 | 0.00 |

We can see the summary statistics using by embedding an R code chunk like this:

```
## speed dist
## Min. : 4.0 Min. : 2.00
## 1st Qu.:12.0 1st Qu.: 26.00
## Median :15.0 Median : 36.00
## Mean :15.4 Mean : 42.99
## 3rd Qu.:19.0 3rd Qu.: 56.00
## Max. :25.0 Max. :120.00
```

You can also embed plots for example:

Histogram of cars\$speed

Note
that the `echo = FALSE` parameter was added to the code chunk to prevent printing the R code generating the plot. Also, if we write `eval = FALSE` parameter in the code chunk, the R code will not be executed.

For more complex tables consider 'pander' or 'stargazer'

Relationship between R Markdown, Knitr and Pandoc

- Pandoc is a document converter. It can convert from a number of different markup formats to many other formats, such as .doc, .pdf etc.
- R Markdown is based on markdown: a lightweight markup language with plain text formatting syntax designed so that it can be converted to HTML and many other formats
 - ! no clearly defined Markdown standard
- rmarkdown is a library which processes and converts .Rmd files into a number of different formats

In detail see: <https://stackoverflow.com/questions/40563479/relationship-between-r-markdown-knitr-pandoc-and-bookdown>
